

ROTARY COARSE

FOAM POLISHING PAD

RUPES ROTARY COARSE foam pads deliver aggressive polishing action without sacrificing the comfort you experience or the finish quality you create with RUPES ROTARY COARSE foam pads. Made from a proprietary foam, these pads provide rotational stability and manage heat build-up. RUPES ROTARY COARSE foam polishing pads were developed with RUPES ROTARY COARSE compound to create a color-coordinated, highly synchronized system. The result is the fast removal of sanding marks and surface defects along with the creation of a high-gloss finish that requires only minimal follow up polishing.

TIPS FOR SUCCESS

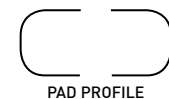

- Pair this pad with RUPES ROTARY COARSE compound for best results
- Always prime the pad first to ensure a smooth experience from initial application
- Use small amounts of compound to reload the pad; oversaturating will lead to diminished performance
- Clean pads frequently during use with compressed air, a vacuum, or RUPES Claw Pad Tool to maintain consistent performance
- Using metal spurs or hard tools to clean pads will cause damage and shorten pad life
After use: clean with warm water and a mild soap, rinse well to remove residues, air dry
